STUDY OF AREAS IN CUBA
REPORTED AS SUSPECT MISSILE SITES

This brief presents the results of a photographic study of areas in Cuba which, according to numerous information reports, contain suspect missile sites. A review of the reports shows that 22 different locations or place names have been used in reference to the "suspect missile sites." A search of the best available [REDACTED] TALENT photography produced no positive evidence of missile facilities or activity at or near any of the 22 locations. Brief descriptions of the activity observed at each location follow. Each description is followed by photo and document references which include the date of the photography examined and the date of the information given in the document.

1. Cayo Largo (21-40N 81-25W)

No identifiable missile activity was observed. A graded-earth runway, not yet complete, measuring 3,500 by 225 feet and oriented northwest/southeast, was observed at 21-37N 81-33W, with support facilities at the northwest end of the runway. Construction of both the runway and support facilities appeared at a standstill in [REDACTED]. Construction of a seaside resort 2.8 nautical miles (nm) southeast of the runway also appeared at a standstill. The resort area is connected by road to the runway area.

Document: ONI/5ND-10-S-61, 25 Aug 61, date of info 1961 (S/NoforN)

2. Minas del Frio (20-00N 76-59W)

No identifiable missile activity was observed within a 5-nm radius of Minas del Frio. At Minas del Frio, road construction and mining were observed. A camp containing 40 buildings is located in the area.

3. Mayari Arriba (20-27N 75-31W)

No identifiable missile activity was observed within a 5-nm radius of Mayari Arriba. The only item of interest is a building area containing 14 barracks-type buildings and several small support buildings. Just west of the building area is a group of ten pit diggings partially grass-covered and water-filled. A gravel runway 4,200 feet long and oriented east/west is located at 20-25N 75-31N. A small hangar and a small building complex are under construction south of the runway.

14. Tapaste (23-01N 82-08W)

No identifiable missile activity was observed within a 5-nm radius of Tapaste. An installation under construction at 23-03N 82-06W, 2.2 nm east-northeast of Tapaste and .8 nm north of Mendoza includes five and possibly six excavations or cuts 200 by 30 feet (depth undetermined) on the rim of a cliff. Buildings have been constructed over or are straddling two of the excavations or cuts. Several other small buildings are in the immediate vicinity.

18. Lomas de Bejucal (22-55N 82-23W)

No identifiable missile activity was observed within a 5-nm radius of Bejucal. Two installations of undetermined function are located in the area. The first installation, at 22-56N 82-24W, one nm northwest of Bejucal, includes an earth-covered, concrete building and an earth-covered, concrete drive-through structure. The second installation is under construction at 22-56N 82-23W, one nm northeast of Bejucal. It includes an earth-covered, doglegged building; a connected earth-covered, drive-through structure; a
